Wire glass

DSB glass

To dispel the myth that the Model 901 (aluminum service station door) is only for use in service station applications, we traveled to Minneapolis, Minnesota to the Minneapolis Mega Mall. This mall features a Hooters restaurant with eight fully functional Model 901 doors.

In the morning the doors open to connect the restaurant with tables in the hallway. This provides additional space for the dining enjoyment of their customers. In the evening, these doors close to provide an attractive "modern-looking" aesthetically pleasing security barrier to protect the contents of the restaurant.

The doors were installed by Automatic Door of Minneapolis. The General Contractor (Nelson Brothers) wanted to work with Automatic Door because of their reputation for quality products and workmanship.

The owners wanted a light-weight door which was relatively maintenance-free, and very aesthetically pleasing. They found the Model 901 to meet all of their criteria, and are very pleased and satisfied with their new doors.
